

Purpose and Objective:

Purpose:

The project aims to enhance the application and enrolment process for the different programs by replacing the current email-based system with a comprehensive mobile application.

Objective:

1. create a user-friendly experience for applicants.
2. Make it easier for university staff to manage all applications.
3. Digitize the Enrollment process.

Users:

1. Applicants
 - Create accounts.
 - submit required documents.
 - track progress
 - receive notifications on updates.
2. University Staff
 - Access applicant information,
 - Mange every application (review documents, provide feedback, update statuses...)

Features:

1. User Authentication
 - Secure login for applicants and university staff.
2. profiles for applicants and staff.
3. Dashboard:
 - Show an overview of the application process and the status of the application.
4. Step-by-step guidance through the enrollment process.
 - Checklist for required documents.
 - Secure file upload for required documents.
 - Notifications for completed steps and pending actions.
5. Real-time status updates.
 - Clear indications of completed and pending steps.
6. In-app messaging for communication between applicants and university staff.
7. Automated notifications for important updates.
8. Support and Guidance:
 - FAQs and resources for common queries.
9. Push notifications for updates and reminders.

Technology Stack:

Frontend: Angular

Backend: ASP.NET

Database: PostgreSQL

Hosting: AWS or Heroku for application hosting.

Example of current Enrollment management systems to study and develop the best possible product:

- <https://mitsloan.mit.edu/emba/introduce-yourself>
- <https://admission.stanford.edu/apply/>
- <https://www.gse.harvard.edu/admissions-and-aid/apply> [Text Wrapping Break]

Suggested project plan:

1. Project Initiation:

- Define Project Scope, Identify Stakeholders, Set Project Goals and Objectives

2. Team Formation:

- Role Definition, Kickoff Meeting:

3. Requirements Gathering and Prioritization:

- User Stories Refinement, Prioritize User Stories

4. Design Phase:

- UI/UX Design, Database Design

5. Sprint 1 - Basic Functionality:

- User Authentication, Profile Creation, Basic Dashboard

6. Sprint 2 - Core Features:

- Guidance and Checklist, File Upload, Real-Time Status Updates

7. Sprint 3 - Communication Module:

- In-App Messaging, Automated Notifications

8. Sprint 4 – Notifications and Guidance:

- Push Notifications, FAQs and Resources

9. Integration and Testing:

- Integrate Frontend and Backend, and do the QA

10. Documentation:

- User Manuals and Technical Documentation:

11. Deployment[Text Wrapping Break][Text Wrapping Break][Text Wrapping Break]suggested team

roles[Text Wrapping Break]Scrum Master (1 person):

- Responsible for facilitating the Scrum process and ensuring that the team follows Scrum practices.
 - Removes impediments and helps the team stay focused on their goals.
 - Coordinates with product owners and stakeholders.
2. Product Owner (1 person):
- Represents the voice of the customer and defines the product backlog.
 - Prioritizes features and user stories based on business value.
 - Works closely with the team to ensure the product meets user needs.
3. Development Team (Frontend and Backend) (2 people):
- Frontend Developers (Angular): Develop and maintain the user interface of the mobile application.
 - Backend Developers (ASP.NET): Implement server-side logic and ensure seamless communication between the front end and the database.
4. Database Developer/Administrator (1 person):
- Designs and maintains the database (PostgreSQL).
 - Ensures data integrity, security, and optimal performance.
5. DevOps Engineer (1 person):
- Manages the deployment pipeline and ensures continuous integration and delivery.
 - Configures and maintains the hosting environment (AWS or Heroku).
6. Quality Assurance (QA) (1 person):
- Conducts testing to ensure the application meets quality standards.
 - Performs both manual and automated testing.
7. UI/UX Designer (1 person):
- Designs user interfaces and ensures a positive user experience.
 - Collaborates with the development team to implement design elements.

8. **Documentation Specialist (1 person):**
 - Creates and maintains project documentation, including user manuals and technical documentation.
 - Ensures that documentation aligns with project requirements and updates.
9. **Communication Coordinator (1 person):**
 - Facilitates communication within the team and ensures everyone is informed of project updates.
 - Coordinates with stakeholders to gather feedback and requirements.
